ANTICOAGULATION CLINIC

The Anticoagulation Clinic is designed for patients taking warfarin (e.g. Coumadin®). If you have a patient that is taking warfarin, you are able to refer them to our pharmacist-managed clinic. Using patient-preferred “finger-stick” sampling, the Point-of-Care INR results are immediately available to the pharmacist and patient, and if needed, dosage modifications are made during the appointment. Upon leaving the clinic the patient knows his/her results, dosage instructions, and when to return to the clinic for follow-up.

Phone: (517) 975-2950

Fax: (517) 975-2955

IBRAHIM SHAH, MD
MEDICAL DIRECTOR

ATRIAL FIBRILLATION CLINIC

The Atrial Fibrillation Clinic offers the most advanced treatment approaches through a specially trained, multidisciplinary team. Since Atrial Fibrillation can affect each patient differently, our treatment approaches are tailored to specific patient needs.

The Atrial Fibrillation Clinic has expertise in offering treatment which may include anti-arrhythmic medication and ablations. According to multiple studies published in New England Journal of Medicine, it is recommended that ablation strategy is used early in the treatment for better patient outcome.

CARDIAC REHABILITATION

McLaren Greater Lansing's cardiac rehabilitation program is designed to help patients achieve and maintain cardiac fitness through a program of exercise and education. McLaren offers a three-phase program to strengthen the heart and improve overall health.

Phone: (517) 975-7050

Fax: (517) 975-7062

CARDIAC CATHETERIZATION LAB

McLaren Greater Lansing's updated cath lab includes specialized equipment where minimally invasive procedures are performed to diagnose and treat cardiovascular conditions. These interventional procedures can be an appropriate alternative to surgery for many patients.

Phone: (517) 975-6125

Fax: (517) 975-6132

CARDIAC ELECTROPHYSIOLOGY CLINIC

The electrophysiology (EP) program at McLaren Greater Lansing offers a wide range of EP services for your patients including various different ablations.

There are many different heart rhythm conditions. The McLaren specialists will determine precisely what the issue is and the best treatment for your patient dealing with heart rhythm conditions such as arrhythmia and atrial fibrillation (AF).

PULMONARY HYPERTENSION CLINIC

Patients can receive a comprehensive, sophisticated approach to the diagnosis and treatment of this life-altering disease right here in our community with the area's only physician who is fellowship-trained in pulmonary hypertension.

At the Pulmonary Hypertension Clinic, we evaluate and provide treatment options best suited for your patient. Additionally, we take time to educate the patient and their families about pulmonary hypertension and their risk factors.

STRUCTURAL HEART DISEASE AND VALVE CLINIC

The Structural Heart Disease and Valve Clinic's goal is to deliver the highest quality care dedicated to evaluation and management of patients with valvular heart disease.

Minimally-invasive procedures available at the Structural Heart Disease and Valve Clinic include transcatheter aortic valve replacement (known as TAVR), and left atrial appendage (LAA) closure implant. TAVR can help relieve and improve symptoms from severe aortic stenosis and increase life expectancy. The LAA closure implant is a permanent heart implant used to treat atrial fibrillation not caused by a heart valve problem.

The structural heart team recently celebrated their 200th TAVR procedure at McLaren. For more information, visit mclaren.org/tavr.
