MCLAREN GREATER LANSING ENDOSCOPY CENTER

3520 Forest Rd., Third Floor
Lansing, MI 48910

McLaren is home to some of mid-Michigan's most experienced endoscopy specialists, who skillfully operate an endoscope to examine the inside of the body for signs of disease or to remove tissue. Each year, nearly 10,000 endoscopy procedures are performed at McLaren Greater Lansing.

WHY CHOOSE MCLAREN?

We offer:

- Esophageal manometry
- PH Reflux Study
- ERCP (endoscopic treatment for gallstones and other biliary conditions)
- Endoscopic ultrasound with needle biopsy or fine needle aspiration
- Esophageal, colonic, biliary and pancreatic stenting
- Esophageal dilation as a treatment for dysphagia
- Esophageal variceal banding
- Hemorrhoid banding
- Capsule camera placement
- PEG feeding tube placement and replacement
- Screening colonoscopies and EGDs prior to gastric surgery

PROVIDERS WHO ALSO PROVIDE ENDOSCOPY AND COLONOSCOPY SCREENINGS

Phone: (517) 487-8255
Fax: (517) 487-2059

- Jeffery Deppen, DO
- Troy Ferguson, DO
- Werner Henning, DO

ENDOSCOPY

Endoscopy is the visual examination of the upper intestinal tract – esophagus, stomach, duodenum, and biliary tract, the lower intestinal tract – colon, sigmoid, and rectum. Endoscopy procedures give doctors a way to examine the inside of the body in a minimally invasive way. All endoscopies are performed by board-certified specialists. Physicians, nurses, and support staff at the McLaren endoscopy labs are highly trained specialists who focus on patient privacy and comfort while producing the desired results. They are prepared to respond 24/7 to every need, from diagnostics to life-threatening conditions.

**FROM REFLUX
TO COLORECTAL
CANCER, WE HAVE
YOU COVERED**

COLONOSCOPY

A colonoscopy is a procedure that allows our providers to check the inside of your patient's entire colon (large intestine). They are the gold standard for detecting cancerous polyps in the colon. During a colonoscopy a small flexible tube with a camera at the tip is inserted into the anus. It passes through the rectum and colon to detect abnormalities. During this procedure, our providers may biopsy or remove suspicious-looking areas. Patients are sedated for this procedure.

KARMANOS CANCER INSTITUTE GASTROINTESTINAL (GI) MULTIDISCIPLINARY CLINIC

3520 Forest Road
Lansing, MI 48910
Phone: (517) 975-7808

The colorectal clinic is a comprehensive clinic located in Karmanos Cancer Institute at McLaren Greater Lansing. Together, a team of colorectal surgeons, medical oncologist and radiation oncologists provide total care to all our oncology patients. Our oncology social workers and a specialized nurse navigator work to assist patients in care coordination and social stresses during and after treatment. The Colorectal Clinic treats all types of colorectal cancers including appendix, small bowel, anal, rectal, and cancers of the ascending and descending colon.

COLON AND RECTAL CANCER

Colorectal cancer is typically more prevalent in older patient populations. However, over the past 30 years, colorectal cancer cases in patients under 50 has been rising.

It is important if your patient displays any symptoms for colorectal cancer, to order a colonoscopy, which is the gold standard for screening. We have many resources for colorectal cancer from screening to a multidisciplinary clinic if cancer is detected that consists of surgeons, medical oncologists, radiologists, nurse navigators and additional support for your patient. Every cancer case is unique, we treat them uniquely.

SCREENING

Generally, patients at average risk should begin screening at age 45 and continue every 10 years. Those at an increased risk may begin screening sooner and continue with more frequency. Your patient may be at an increased risk if they have a family history of colorectal cancer or other genetic factors (e.g., Lynch syndrome or familial polyposis, have IBD, or a personal history of colorectal polyps).
